## **Listing Of Claims**

Claims 1-60 (Canceled)

- 61. (new) A contact for making an electrical connection with a component contact on a semiconductor component comprising:
  - a substrate;
- a plurality of spring segment leads having a height on the substrate;
- a support member attached to the leads, suspended on the substrate with the height and configured to support the component contact; and
- a projection on the support member configured to penetrate the component contact.
- 62. (new) The contact of claim 61 wherein the leads are configured to twist the projection.
- 63. (new) The contact of claim 61 wherein the leads have an extensible configuration.
- 64. (new) The contact of claim 61 wherein the plurality of spring segment leads have a spiral configuration.
- 65. (new) The contact of claim 61 wherein the support member comprises a plate.
- 66. (new) The contact of claim 61 wherein the projection comprises a blade.

- 67. (new) The contact of claim 61 wherein the component contact comprises a bumped contact.
- 68. (new) The contact of claim 61 further comprising a polymer material between the support member and the substrate.
- 69. (new) A contact for making an electrical connection with a component contact on a semiconductor component comprising:
  - a substrate;
- a plurality of spring segment leads having a height on the substrate;
- a support member attached to the leads, suspended on the substrate with the height and configured to support the component contact and to travel by a distance equal to the height;
- a plurality of conductive vias in the substrate, each spring segment lead in electrical communication with a conductive via; and
- a projection on the support member configured to penetrate the component contact.
- 70. (new) The contact of claim 69 wherein the support member comprises a plate.
- 71. (new) The contact of claim 69 further comprising a terminal contact on the substrate in electrical communication with the conductive vias.

- 72. (new) The contact of claim 69 wherein the spring segment leads are configured to exert a torque on the support member.
- 73. (new) The contact of claim 69 further comprising a polymer bump between the support member and the substrate.
- 74. (new) The contact of claim 69 wherein the height is from about 10-25 mils.
- 75. (new) The contact of claim 69 wherein the component contact comprises a bumped contact.
- 76. (new) The contact of claim 69 wherein the substrate comprises a semiconductor material.
- 77. (new) A contact for making an electrical connection with a component contact on a semiconductor component comprising:
  - a substrate having a recess;
  - a plurality of cantilevered leads on the recess;
- a support member attached to the leads for movement into the recess, the support member configured to support and electrically engage the component contact during the movement into the recess; and
  - a projection on the support member.
- 78. (new) The contact of claim 77 wherein the recess has a depth and the movement into the recess is by an amount approximately equal to the depth.

- 79. (new) The contact of claim 77 wherein the leads are configured to exert a torque on the support member.
- 80. (new) The contact of claim 77 wherein the projection comprises a blade configured to penetrate the component contact.
- 81. (new) The contact of claim 77 wherein the component contact comprises a bumped contact.
- 82. (new) The contact of claim 77 further comprising a plurality of conductive vias in the substrate in electrical communication with the cantilevered leads.
- 83. (new) The contact of claim 77 wherein the leads have an extensible configuration.
- 84. (new) The contact of claim 77 wherein the substrate comprises a semiconductor material.
- 85. (new) The contact of claim 77 wherein the support member comprises a plate.
